

PŪRA AMAZON. Product Manual.

PŪRA Amazon is a true organic filter media with a stable granular structure and a large surface area, it colonizes quickly with beneficial filtering bacteria and microorganisms. High lignin content makes this media resistant to both aerobic and anaerobic degradation; a low acid content makes it easy to maintain a steady pH and hardness while using PŪRA Amazon media.

PŪRA Amazon releases enzymes that stimulate and promote root development in aquarium plants and cutin monomers that boost plants' immune response. With stronger roots, plants grow better and assimilate nutrients more efficiently.

Directions

PŪRA Amazon media can be used in any filter inside the provided media bag. This media can also be placed into a Bio-Bag or any other filter pouch or basket. For best results place the media into a direct flow of water without bypass.

For a community tropical aquarium use 8 to 16 oz of PŪRA Amazon media per 50 Gal. of water. Replace media every 4 to 8 weeks.

For a soft water species aquarium use 8 to 16 oz of PŪRA Amazon media per 30 Gal. of water. Replace media every 4 to 8 weeks.

To induce spawning of tetras, angelfish, or discus use 8 to 16 oz of PŪRA Amazon media per 20 Gal. of water. Replace media every 4 to 8 weeks.

For aquarium use only. Keep out of reach of children! Do not take internally.
