

PŪRA COMPLETE. Tech Fact & Specifications.

WHAT IS IT? All-in-one broad-spectrum chemical filtration media.

COMPOSITION: 25% PhosLock brand modified Granulated Ferric Hydroxide Oxide (GFH), 64% modified high purity zeo-sorbent (Ion Exchange Capacity of 1.65-2.10 meq/g or higher) and 11% select grade acid washed activated carbon.

PURPOSE: To be used in fresh and salt water aquariums to remove large quantities of environmental and metabolic aquarium toxins including: ammonia, phosphate, silicates, arsenic, copper and other heavy metals, organics and residual medications.

BENEFITS: All-in-one convenience and simplicity. Maintains extremely low to non-measurable levels of phosphate and silicates thus greatly reducing propagation of algae. Removes copper, arsenic, zinc and other heavy metals, organics, metabolic wastes and residual medications. Extremely low impact on trace elements and desirable fertilizers like potassium.

Convenient to implement, comes with a 6" x 12" 300-micron media bag.
Available in three sizes: 8 oz, 16 oz and 32 oz.

COMPARISONS: Currently there are no similar products on the market.

FAQ:

How do I use PŪRA Complete?

Confined into enclosed mesh bag, PŪRA Complete can be placed into any canister or wet/dry filter.

Should I supplement PŪRA Complete with other media?

PŪRA Complete removes all of the known major aquarium pollutants; it truly is an all-in-one media.
